Supplier Development

János Takács

Academician, Vice President – IAQ Vice President - EOQ HNC

"An organization and its suppliers are interdependent and a mutually beneficial relationship enhances the ability of both to create value." (International Organization for Standardization Quality Management Principles: Principle 8: Mutually beneficial supplier relationships)

Multinational companies select their suppliers in a competitive environment based on well-defined criteria. These companies developed their own supplier appraisal and selection system, which they apply all over the word in a systematic manner, to the benefit of both parties. Their global supplier quality assurance systems reflect the company culture, in which the most important values are: quality, logistics capabilities, financial performance, environment protection, reliability and commitment. Research and development capacity is of outmost importance, followed by price level and commodity specific requirements. All these help the continuous development of the suppliers and enhance their ability to improve productivity and overall efficiency. Meanwhile the good reputation of the multinational companies is protected and improved.

As quality starts at the suppliers, multinational companies developed and apply severe purchasing procedures. One example is a twenty-step purchasing flow as follows:

- 1. Market Analysis
- 2. Potential Supplier list
- 3. RFQ Grip Benchmarking
- 4. Selected supplier list
- 5. GSQA Procedure sent and supplier feedback
- 6. Supplier Profile fulfilled by the supplier
- 7. Preliminary quality audit

DP1 - Decision to proceed

- 8. Drawings, Supply Specif., Q requirements
- 9. Supply and Quality Agreement (Preliminary)
- 10. Pre Production, Quality Assessment Planning
- 11. Preliminary samples with test results reports
- 12. Fine-tune product and re-sampling
- 13. Supplier process audit

- 14. Pre Production, Quality Assessment guided Implementation
- 15. Initial sample homologation
- 16. Industrial trial (Application homologation report)
- 17. Supply and Quality Agreements finalization

DP2 - Production / Delivery release

- 18. Ramp-up production
- 19. Ongoing business evaluation (Q status, QES report)
- 20. Follow up (Within 6 months from production)

Main focus is to actively engage pro-active suppliers who can interact multi-functionally with their customer in order to generate innovation, shorten the time-to-market, reduce total product cost, improve product quality, optimize performance/cost ratio, have early project involvement (front-loading).

The supplier criteria fall into seven categories which together give a comprehensive picture of requirements and performance / capabilities.

- 1. Quality / Operations quality and process system assurance, quality performance, capacity flexibility
- 2. Logistics delivery performance (errors), lead time
- 3. Finance financial position
- 4. Environment environmental systems and effort
- 5. Company profile strategic confidence, supplier commitment
- 6. Technology R&D capabilities
- 7. Price price level, price risk / trend

In addition to the above commodity specific criteria are taken into consideration.

Based on the evaluation / assessment of the suppliers, multinational companies classify them into different categories.

- 1. Supported fulfils customer requirements, see e.g. price, accepted quality, support customer's processes with their strategy.
- 2. Active if the supplier of the previous category cannot be used, this satisfies customer's minimum quality requirements
- 3. Restricted the supplier is not involved in the new projects. No commitment to the realization of common goals.
- 4. Excluded minimum quality requirements are not met. No partnership in the future.
- 5. Potential for the time being, not a partner, but has the potential to become a partner in the future.

Responsible multinational companies have supplier development programs, helping their suppliers to grow and improve quality and overall efficiency. They enter in strategic partnership with their suppliers, consisting of various support, such as: involvement in product development / innovation at early project stage, offering professional / technical support or common sourcing of raw materials (buying power).

In all this procedure Communication, Consensus, Cooperation (the 3 Cs) are the key to success for both multinational companies and their suppliers.

Supplier Development

Supplier Relationship

"An organization and its suppliers are interdependent and a mutually beneficial relationship enhances the ability of both to create value."

(International Organization for Standardization Quality Management Principles: Principle 8: Mutually beneficial supplier relationships)

Our Quality starts at our Suppliers

- 1. Market Analysis
- 2. Potential Supplier list
- 3. RFQ Grip Benchmarking
- 4. Selected supplier list
- 5. GSQA Procedure sent and supplier feedback
- 6. Profile fulfilment by the supplier
- 7. Preliminary quality audit

DP1 Decision to proceed

- 8. Drawings, Supply Specif., Q requirements
- 9. Supply and Quality Agreement (Preliminary)
- 10. Pre Production, Quality Assessment Planning

Our Quality starts at our Suppliers

- 11. Preliminary samples with test results reports
- 12. Fine-tune product and re-sampling
- 13. Supplier process audit
- 14. Pre Production, Quality Assessment guided Implementation
- 15. Initial sample homologation
- 16. Industrial trial (Application homologation report)
- 17. Supply and Quality Agreements finalization

DP2 Production / Delivery release

- 18. Ramp-up production
- 19. Ongoing business evaluation (Q statusing, QES report)
- 20. Follow up (Within 6 months from production)

Our Quality starts at our Suppliers

Main focus is to actively engage pro-active suppliers who can interact multi-functionally with their customer in order to:

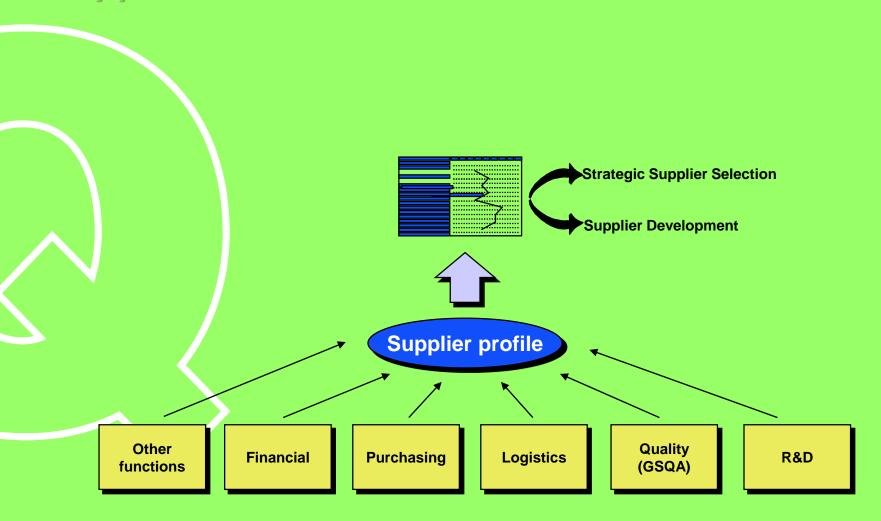

- generate innovation
- shorten the time-to-market
- reduce total product cost
- improve product quality
- optimize performance/cost ratio
- have early project involvement (front-loading)

Supplier Criteria

The supplier criteria fall into seven categories which together give a comprehensive picture of requirements and performance/ capabilities.

Category	Criteria
Quality/operations	Quality and process system assurance Quality performance Capacity flexibility
Logistics	Delivery performance (errors) Lead time
Finance	Financial position
Environmental position	Environmental systems and effort
Company profile	Strategic confidence Supplier commitment
Technology	R&D capabilities
Price	Price level Price risk/trend
Commodity specific	Commodity specific criteria* Commodity specific criteria*

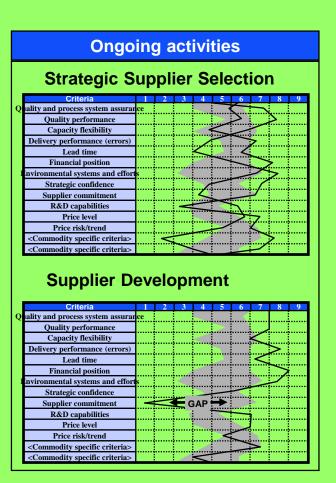

Supplier Profile

Supplier Profile Tool

After an initial set-up of mapping requirement profiles and supplier performance profiles, Supplier profile tool will support various ongoing activities.

Supplier Classification

Supplier classification	Description
Supported	Fulfils customer requirements, see e.g. price, accepted quality, support customer's processes with their strategy.
Active	If the supplier of the previous category cannot be used, this satisfies customer's minimum quality requirements
Restricted (hold)	The supplier is not involved in the new projects. No commitment to the realization of common goals.
Excluded	Minimum quality requirements are not met. No partnership in the future.
Potential	For the time being, not a partner, but has the potential to become a partner in the future.

EOQ MINB

Supplier performance, follow-up and actions

An approach to quality problems

R&D - Prevention

- The procurement is part of the IPDP (Integrated Product Development Process)
- Joint setting of clear goals
- Early engagement of suppliers in the development projects

Annual development programs

- > Primary input is the Service Call Rate (SCR)
- Systematic approach involving the assigned team leaders and setting clear goals

"On-hold" process

Primary input is the continuous assessment

Supplier quality development program

1. Selection of proper parts and suppliers

- 6. First follow-up meeting (after 3 months)
- 7. Second follow-up meeting (after 6 months)

Supplier Strategic Partnership

- 1. Involvement in product development / Innovation at early project stage
- 2. Professional / technical support
- 3. Common sourcing of raw materials (buying power)

Innovation

"Innovation - in the long run - is the ability of an individual or a group of individuals to think a thought that no one else has thought before and than successfully turn that idea into reality that separate the best from the rest."

Jonas Ridderstråle, Kjell A Nordström – Karaoke Capitalism

The "3 C" Principle

"Communication, Consensus, Cooperation (the 3 Cs) are the key to success both on company, national economy and world economy level."
